"New research center is to bring a unique combination of different physical approaches. We will also try to apply holograms on new substrates and open a lot of interesting new questions. Rather than just development of new products, our goal is to reach a thorough understanding of a phenomenon. This will enable us to build entirely new solutions," said Dr. Tomáš Karenský, senior research manager in OPTAGLIO.

An important part of research activities will focus on microholograms, tiny particles with a holographic surface, invented by OPTAGLIO. Microholograms are sometimes called "holographic dust" and enable several levels of inspection, including forensic.

OPTAGLIO is uniquely positioned to run a scientific center focused on forensic technologies. In 1994, it originated from Czech Academy of Science and research is still a top priority for the organization.

OPTAGLIO has built an international scientific team and large research center, OPTAGLIO Labs, in Lochovice in Central Bohemia (Czech Republic). The company is a pioneer and the global leader in e-beam lithography and patented many innovations, including microholograms and specific technologies for integrating optical security features into polycarbonate cards.

#### About OPTAGLIO:

OPTAGLIO is a leading global provider of advanced optical security devices and the market leader in e-beam lithography. During almost 25 years of our history, we have delivered hundreds of millions of holograms to governments, financial institutions and other organizations in more than 50 countries around the world. Our unique technology has been broadly recognized as the industry standard for optical security.

OPTAGLIO, certified to relevant international standards, operates under strict 24/7 security supervision. Our comprehensive security system covers people, processes, data and facilities. The company is a member of International Hologram Association (IHMA) through which it registers all its security devices and hologram in the central security register, in London.
